

To support or not to support

A youth parliament in an average city is invited to a meeting of a nationalist movement. The meeting is dedicated to the immigration policy of the given country. A representative of the parliament attends the meeting and he signs the declaration prepared there under the title „For a cleaner country“.

In this declaration the idea is passed that the country should terminate the acceptance of foreigners from Eastern countries, especially from the Middle East. It further states: „The immigrants from the Middle East, who are already in the country, should be deported back, unless they have not lived here for at least 5 years, they do not pass a test and they do not have a permanent, well paid job.“

Those who meet the criteria though should not have the right to marry locals, nor have children. According to the declaration, this is the only way the country could be saved from „pollution“. After the meeting the entire text is published on the web page of the youth parliament with a note that supporters and partners for the idea are needed. A viewing of the site of the parliament shows that it has realized various initiatives and projects promoting tolerance and intercultural dialogue.

We are looking forward to hearing from you!
